## About

Hello, I'm Suki. A legal immigrant from Costa Rica who's been in the USA for 8 years. I was a coder ( php, mysql, html, css) before moving to this country but eventually I became "rusty" since I had to work in other fields since I arrived .

I just graduated from the FullStack Academy "Web Development" bootcamp where I learned all the new ways, platforms and tools used nowadays to do what I used to do and I'm eager to immerse myself again in the world of coding which I missed so much.

I enjoy designing User Interfaces with React as much as I enjoy building web services with Express and Prisma. I love to be able to understand how to create the whole thing and how to connect all the parts together, just like building a puzzle. As a hobby, I like to work on personal IT ideas such as promoting art and culture in my country and region.

I'm open and looking for work, where I can continue to develop my skills and To grow as a full stack web developer. I also would love to work one day in AI and machine learning.

## Experience

- **ICS Mobile, Santa Monica, CA** - *Full Stack Web Developer*  
JANUARY 2010 - JULY 2014

I co built a startup named "Free App a Day" with Joe Bayen, an IT entrepreneur that wanted to offer a paid app for free, each day of the month, as a way for new apps to be known, have more visibility. I built the front end and back end, while Joe did the marketing, sales and operations . The Startup was successful for 4 years until the Apple Store intervened to shut it off , because according to them, our business model interfered with their App Store algorithm.

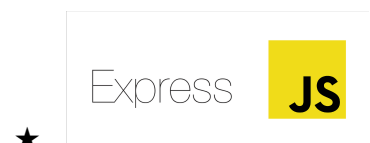

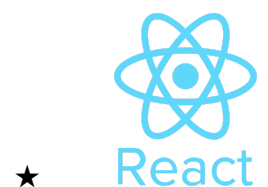

## Skills

- ★ Positive Attitude
- ★ Teamwork mentality
- ★ Clean and fast
- ★ Listen to instructions
- ★ Proactive
- ★ Customer Service Oriented
- ★ Hardworker
- ★ People say "I'm funny"

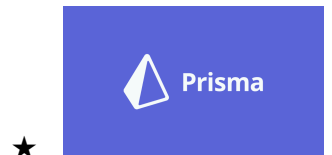

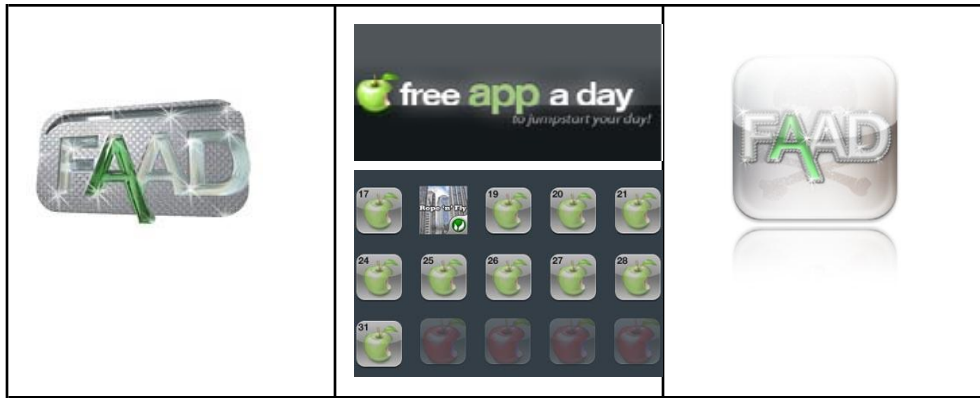

## Languages

- ★ Spanish: Fluently
- ★ English: Fluently

## Tools and libraries

I used Mysql, php, html and css to build it . It populated a calendar dynamically on the landing page, showing the paid app that was going to be free each day of the month. Eventually, we hired a team in Pakistan that built an app and my work the was to communicate with them to connect my web services to their client ( with php and json) . This is some imagery for the startup.

- **Costa Rican National Stock Exchange** · – *Full Stack Web Developer*  
FEBRUARY 2004 - JULY 2007 . Full time.

I participated in the migration of the Costarican National Stock Exchange outdated software into a brand new software, built by us, that resembled New York's Bloomberg. I was part of one of many teams that were building components related to financial transactions. We coded in Visual Basic.Net and IIS Server, because Microsoft had the strongest tech support ( I was a fan of Richard Stallma at the time and wanted to code in php). I learned a lot of SQL Transact.

- **Suki's Websites Wordpress** – *Full Stack Web Development*  
MARCH 2017 - Present

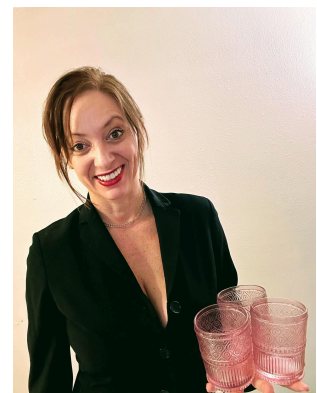

While I was working in the hospitality industry , I self thought how to use Wordpress and built these websites. I plan to migrate them all to React .
